Objective

Seeking an AI/ML or Software Engineering Internship to apply a strong academic foundation in Machine Learning and Edge AI to real-world business challenges. Dedicated to delivering optimized code and practical AI models, while continuously expanding technical skills and growing within a fast-paced technology environment.

Education

Ho Chi Minh City University of Technology (HCMUT – VNUHCM) Ho Chi Minh City, Vietnam
B.Sc. in Computer Science – Japan-Oriented Program Sep 2023 – Present

- Relevant Coursework: Machine Learning, Data Structures and Algorithms, Operating Systems, Database Systems, Software Engineering

Projects

Pneumonia Diagnosis Web Jan 2026 - Present

Tech: Python, TensorFlow/Keras, CNN (ResNet/MobileNet), FastAPI/Flask, Streamlit, Git

- Developed a Deep Learning model based on Convolutional Neural Network (CNN) architecture to analyze chest X-ray datasets of 5,863 images for pneumonia detection.
- Optimized hyperparameters and applied Data Augmentation techniques, achieving an accuracy of 64 % on the test set.
- Integrated the AI model into an end-to-end web application using [Streamlit/FastAPI], enabling users to upload X-ray images and receive diagnostic results with a latency of under 5 seconds.

AI Dermatologist Mobile App Mar 2026 - Present

Tech: Flutter, Dart, Python, TensorFlow Lite, Computer Vision, Git

- Engineered a cross-platform mobile application (iOS/Android) using Flutter, providing a minimalist and smooth user experience for capturing images and diagnosing dermatological conditions.
- Converted and optimized the skin disease recognition model from .keras to TensorFlow Lite (.tflite) format, reducing model size to 5MB to accommodate mobile memory constraints while maintaining high reliability.
- Deployed an "Edge AI" feature enabling real-time, on-device inference without internet connectivity, ensuring the strict privacy and security of personal medical data.
- Implemented a comprehensive internationalization (i18n) system supporting English, Japanese, and Vietnamese, expanding global user accessibility.

Technical Skills

Programming: Python, Dart, C++, Java, JavaScript

Machine Learning / Data: TensorFlow, Keras, TensorFlow Lite, Computer Vision, CNN (ResNet, MobileNet), Data Augmentation

Software Engineering: Flutter, FastAPI, Flask, Streamlit, Git, Docker, RESTful APIs

Database: MySQL, SQL
